REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: **the specific limitations of** "second driving means (24) for driving the head mounting means (700) to incline the rotation axis (h) of the head member (7) relative to a precession axis (a) intersecting the rotation axis and for moving the head member to incline positions with the rotation axis precessed about the precession axis; and third driving means for relatively moving the head mounting means across the holding surface" **in the combination as claimed in claim 98;** **"control means** for controlling the position and tilt of the face of head by controlling the mounting arrangement and the tilting mechanism, said control means being operative to compensate for movement of the face when tilted by controlling the mounting arrangement" **in the combination as claimed in claim 129;** **"a head** releasably mounted on said housing, said head comprising a head housing, a head fluid pressure transmission membrane (40), and a resilient membrane forming a sealed head fluid chamber filled with fluid, said head fluid pressure transmission membrane being arranged in said head to cooperate with said housing fluid pressure transmission membrane to transmit pressure to said head fluid chamber, and said resilient membrane being held at a periphery thereof by said head housing to extend bulbously therefrom for the application of pressure to said workpiece during abrading" **in the combination as claimed in claims 167,173,** are not anticipated or made obvious by the prior art in the examiner's opinion. **For example, De Fazio (4,523,409)** discloses automatic contour grinding system. **However,** the art of record considered as a whole, alone or in combination fails to provide or suggest "second driving means (24) for driving the head mounting means (700) to incline the rotation axis (h) of the head member (7) relative to a precession axis (a) intersecting

the rotation axis and for moving the head member to incline positions with the rotation axis precessed about the precession axis; and third driving means for relatively moving the head mounting means across the holding surface; **control means** for controlling the position and tilt of the face of head by controlling the mounting arrangement and the tilting mechanism, said control means being operative to compensate for movement of the face when tilted by controlling the mounting arrangement and a head releasably mounted on said housing, said head comprising a head housing, a head fluid pressure transmission membrane (40), and a resilient membrane forming a sealed head fluid chamber filled with fluid, said head fluid pressure transmission membrane being arranged in said head to cooperate with said housing fluid pressure transmission membrane to transmit pressure to said head fluid chamber, and said resilient membrane being held at a periphery thereof by said head housing to extend bulbously therefrom for the application of pressure to said workpiece during abrading”.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
